

Assignment V

B0544255 許懿傑

After graduation, we all need to get into society. Maybe someone will have their own career, or lucky to proceed the company from family, but most of graduates will find their first full-time job. There are many ways to search jobs, like web, newspaper also has some pages for job providing. "monster.co" is a leading job-site, which provides 200000 jobs a day. Suppose that I am a graduate, what will be my first full-time? In my opinion, the job should be in the same field which you loved, also pay all passions into.

The job I want to apply is “ Mobile Developer (iOS / Android) “. There is nothing greater than being a developer with Apple’ s code language “ Swift “. Swift is a whole new language for coding, the limit is it can only run for Apple devices, such as iOS, MacOS, WatchOS, and tvOS. I am now making a mobile app in Department Computer Science. I have experience coding with swift for 2-3 years. We are running a project to provide a platform combined medicine and the shops. Our goal is making this to spread into the world. Using the artificial intelligence to recognize the label or even the color or logo in the searching. Also provides the nearby shops which tell users where you can buy nearest. Sharing economy is another core support this project. We wish to make the 3-wins between customer, shop, and manufacturer. I pay most of my time discovering what will be the best user interface and the user experience, also persist in the main idea of designing, to maximum the value of what I am working on.

The future of mobile development is inestimable. We will combine the cloud calculating, artificial intelligence, and other advance technologies to support our functions. “ Technology always comes from human nature. ” I cant agree with this quote more. What we are doing is forward to let human being have a more convenience life.

There are more things which I need to study with the development. Database is the one we use the most to connect with the server, also the core data and some third-party functions. The web language like PHP, JSON, Node Javascript is also important for us. I am going to learn more in this field during this summer vacation.

- * Java on Android
- * Google Play store set up
- * JSON
- * REST
- * Knowledge of Gradle/Android Studio
- * Any experience with Kotlin will be a bonus!
