

What products / devices do you use everyday that contain processors?

In the 21 Century, we use lots of electronic system and devices in our life. For example, mobile phones or tablets, computers, electronic watches, bluetooth earphones, or even the charger of the computer contain difference type of processors. Some would be low-energy, its function is to make the energy consumption lower as possible and to make sure the user don't need to be charging every night. As the bluetooth earphones, the processor inside need to calculate lots of data, like connection with the phone, the songs, the voice and so on.
