Assignment VI

B0544255 許懿傑

In the past, people used rocks, branches to note the data. Such as the amount of animals, or how many days were past. If the data has been process with some meanings, then we call that " information ". When the data are increasing, information is also progressing. In the 21 century, the growth changes as exponential.

In my opinion, there will have a limitation of hardware, but on the other hand, software development seems to have a great future. The mobile development is not just making the app. It is also kind of designing to human beings, to make convenience life. There are tones of functions that we can combined in the application. As the technology improvement, functions will follow up. The app can be like a accounting system, or even a learning platform for teaching knowledges. The encyclopedia was the largest database which stored the knowledges, but now, internet is the mostly where people search what they want. So after graduation, I will apply the job as software development engineer. Then how to code perfectly is the most important thing which I should study harder. I am now working with a lab in the Department of Computer Science. We are building a platform with some medical information and other services. This will be a great experience in my college life.
